The Trusted Source of Green Product Information

EcoHome's readers rely on our technical product reviews and project case studies to guide their product selections. And because we require third-party certifications for the products and projects we cover, we deliver the most trustworthy information available. Green building architects, builders, and remodelers turn to EcoHome for the clear answers they need that will help them succeed in this important market.

ecoHome

Features

Category Product Reviews

In-depth analysis of distinct product categories including selection criteria, green attribute comparisons, and practical trade-offs; includes certified product offerings within each category.

Case Study Projects

The best examples of certified green homes from across the country showing how to integrate design and product selection into a full variety of locations, styles, and price ranges.

Departments

EcoUpdate

EcoHome's news blend including new products, projects, programs, trade show coverage, and R&D breakthroughs.

Building Science

Nationally recognized building science experts tackle the tough decisions and details that can make or break a green building project, and share best practices for high-performance homes.

New + Notable

Spotlight on the newest green building products in the market.

GreenWatch

Uncovering the concepts, research, and technologies shaping the future.

Editorial Standards

Product Category Reviews

Products in each category must have achieved third-party labeling or certification from a recognized independent program that covers the areas of performance critical for that category.

Project Case Studies

Projects must have earned third-party certification from a local, regional, or national program that includes field verification during construction and field-testing after completion.
